Here's what our  
customers say:

"We are seeing a 2% bump in protein levels, 1/2 to 1 ton more yield per acre, plus we appreciate the quality and handling of the products"

Bob Sobolik, Iowa

"Regrowth in my crop was faster and I noticed no burning in the new growth. The RFV and protein were greater than expected"

Dan Orth, Kansas

"I apply Agro-Culture Liquid Fertilizers between cuttings, achieving faster regrowth, more cuttings per season, and higher RFV. These products are easy to apply, gentle on my crop, and by combining fertilization with my pesticide application I save time and money."

Steve Wagester, Michigan

## Responsible Nutrient Management

Alfalfa fertility programs have typically been a "one shot" approaches to meeting the yield expectations growers have. Using Agro-Culture Liquid Fertilizer's, producers not only have exceeded yield goals, but experience increases in quality as well. This is accomplished by split applying a more effective fertility program that provides the full nutrition needs of the alfalfa crop when the crop requires it.

Agro-Culture Liquid Fertilizers uses a balanced nutritional approach to achieve maximum yield and quality are:

**Pro-Germinator™** Is a unique Phosphorus product manufactured to reduce tie up from the chemical reactions that occur in the soil. This works as well for application through irrigation as it reduces the potential of reaction with the calcium in the irrigation water. Pro-Germinator™ affords producers the opportunity to apply a highly efficient Phosphorus product as a foliar with a herbicide program or through a center pivot as fertigation. Recommended application rates would be, 1 gallon of Pro-Germinator™ for each ton of alfalfa desired when soil phosphorus levels test low to moderate.

**Sure-K™** Is a highly usable form of liquid Potassium that has no harmful carriers and a very low salt index for less tissue burn. Sure-K™'s exceptional usability produces an high response in either foliar applications or through the irrigation system. Equivalent application rates of 1 gallon Sure-K™ applied for every 13 lbs of K<sub>2</sub>O required by the crop, provides optimum potassium response.

**Micro500™** Contains a complete blend of micro-nutrients making it the perfect choice for top quality hay production. Micro 500™ contains Zinc, Manganese, Copper, Iron and Boron. Using rates of 1 pt to 1qt of Micro 500™ with each application generally provides the nutrient requirements needed for top quality, high yielding hay.

Addition of other secondary and micro-nutrients from Agro-Culture Liquid Fertilizers can be made as well when deficiencies occur. All Agro-Culture Liquid Fertilizers' products can be applied with most alfalfa herbicide programs, foliar or through irrigation. Agro-Culture Liquid Fertilizers recommends that split applications be made to optimize production and that current soil tests be used in making recommendations for top production.

**Pro-Germinator™**

**Sure-K™**

**HighNRG-N™**

**Micro500™**

**eNchance™**
