*Responsible Nutrient Management*

**This is what our customers say-**

*" My son and I have used Agro-Culture Liquid Fertilizers for a couple of years, and are pleased with the results we have been getting. We can use less product and get the same results compared to traditional fertilizers, which speeds up planting. The fact that we can have pre-mixed fertilizer delivered to the farm is also a benefit.*

*Another great advantage is the low salt index allows us to place our starter in row to all of our crops."*

*Rick Totton,  
Totton Farms  
Oxford KS*

**Agro-Culture Liquid Fertilizer allows growers the flexibility of application to maximize yield potential in Cotton.**

**Planter-Time Application -**

**ACLF's** unique products allow fertility needs to be met safely at planting with low salt indexes and efficiently with low application volumes.

High NRG-N™s slow release Nitrogen provides full season nutrition while not overloading the cotton plant in the early growth stages. Controlled release High NRG-N™ reduces cottons luxury consumption of N while providing maximum yield potential.

The use of Pro-Germinator™ improves overall root growth and increases the uptake of both nutrients and moisture. This multi-form Phosphate allows for the enhanced root growth providing the plant the ability to better withstand hot dry conditions and maximizes overall plant health.

Cotton requires a good amount of potassium as it matures and Sure-K™ as part of planter-time and foliar applications insures that your crop receives the potassium it needs when it needs it most to produce high quality top yields.

Including Micro 500™ in the starter band provides the essential micro-nutrients Zinc, Manganese, Copper, Iron and Boron needed for maximum yield potential.

**Side Dress Applications-**

Where there is a need for additional Nitrogen over and above what would be provided in the planter application, the use of High NRG-N™ provides a safe and efficient Nitrogen source.

**Foliar Applications-**

Treat nutrient deficiencies while applying crop protection products combined with "HIGH-PERFORMANCE"™ Agro-Culture Liquid Fertilizers to eliminate trips across the field saving you time and money.
