

Watermelon Yields

Consistently better with ACLF Products

Watermelon Yield 3-year average (2007-2009)

The ACLF programs in these trials at the NCRS began with soil applications prior to planting. Additional fertility was applied with the setter water at transplant. In 2008, foliar applications of ferti-Rain were shown to enhance yields by more than 1 ton per acre. (For complete trial details see 2007-2009 ACLF Research Report)
