

Broccoli is Better with Liquid™

(and maybe a little Cheese)

Over the last four years the Broccoli yields from ACLF based programs have out yielded the conventional fertility program, averaging over 15 cwt/Acre yield increase. The warmer years have shown the best yields from the use of High NRG-N and the cooler years have favored eNanced 28% UAN as the nitrogen source. Still, both programs have been beneficial out yielding the conventional program each year.
