

Increase your alfalfa yield and income with AgroLiquid foliar products

Mitchell Dairy, Winnebago, IL, 3rd cutting yields

This is our new alfalfa plot harvester

AgroLiquid foliar treatments are showing very consistent yield and quality increases in Wisconsin and Minnesota when applied to the 2nd and 3rd cuttings. Application should be made at about 6" using flat fan nozzles. AgroLiquid products can be tank mixed with herbicides, including glyphosate, insecticides, and fungicides. Some of our best results have been on high fertility fields!
