

Directions For Use General Guideline:

For proper agronomic application rates suitable for your geographical area or the maximum allowable non-nutrient application rate per acre, consult a trained soil specialist at AgroLiquid or call or write to AgroLiquid with the address provided.

CalSip (7-0-0-14S-1Ca) is formulated to provide both calcium and sulfur, making it a great fit for many crops. CalSip was developed to improve the nutrient efficiency of calcium and sulfur in low-pH environments, but it can be used wherever there is a need for these nutrients.
