DIRECTIONS FOR USE

PrimAgro® N should be applied using any method that would enable placement in the vicinity of, but not in direct contact with, the plant roots or seeds.

PrimAgro N can be applied:

- versatile planter placement options (away from seed)
- broadcast application prior to or following planting
- application through drip or overhead irrigation (including traveling gun-type irrigation and water wheel irrigation)
- band application below seed placement with strip tillage equipment
- surface band at planting several inches to the side of the seed placement line
- sidedress application to the soil surface or injected

PrimAgro N is not seed safe at normal application rates and should not be applied to crop foliage as tissue burn can occur. An exception to this is with early topdress applications to small grain crops. Although some burn may occur in certain environmental conditions, those situations have not been shown to affect subsequent growth, quality, or yield.

Directions For Use General Guideline:

For proper agronomic application rates suitable for your geographical area or the maximum allowable non-nutrient application rate per acre, consult a trained soil specialist at AgroLiquid or call or write to AgroLiquid with the address provided.

PrimAgro N is a fast-acting 30% nitrogen fertilizer containing sulfur. PrimAgro N is stabilized through proprietary Flavonol Polymer Technology that protects the nitrogen while reducing losses from nitrate leaching and ammonia or urea volatility. PrimAgro N contains a proprietary formulation of nitrogen-fixing bacteria and BioActivites™ that further enhance the sequestration of atmospheric nitrogen in the root zone.
