

Increase Soybean Yields with AgroLiquid

Fertilizer Program Comparisons in Soybeans - 15" rows
North Central Research Station - 2013

* Potash applied in the fall following 2012 soybean harvest.

** In-Furrow Rebounder

13-714

Properly placing Sure-K and micronutrients in a band with the planter or as a foliar application has big benefits over not applying fertilizer to soybeans. And choosing a high quality product like AgroLiquid's Sure-K makes easy work of foliar applications.

Note: Avoid In-Furrow application under extremely dry soil conditions which may result in stand injury.

Choose AgroLiquid nutrients and apply them at the Right Time and Right Place to provide increased yields!
