Foliar Fertility Study on Double Crop Soybeans and Profitability

Many growers feel that double crop soybeans are limited in yield. The purpose of this study was to apply Ferti-K and evaluate yield and profitability

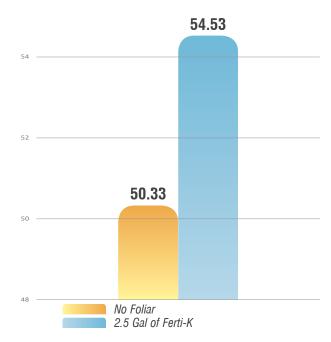

Ferti-K is a product that was developed through our research in conjunction with AgroLiquid. It is made from the highest quality raw materials and has shown a consistent yield response across multiple environments.

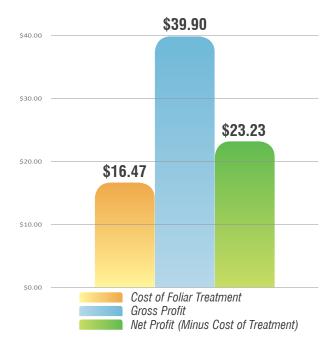

Bushel Increase (Average 2 Locations)

Profit / Acre(2.5 Gallons of Ferti-K Calculated at \$9.50 Soybeans)
