

AgroLiquid Has Top Choices for Wheat Topdress

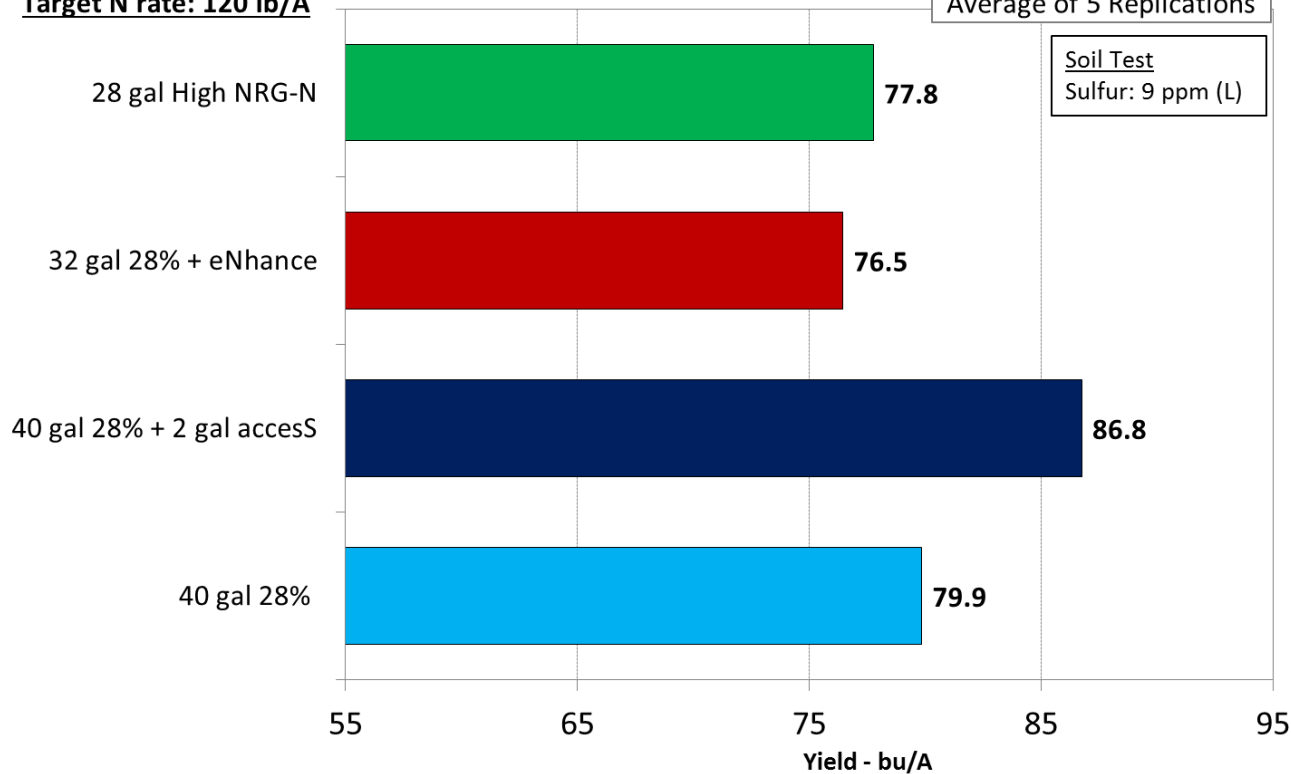

Winter Wheat Nitrogen Source Comparison

North Central Research Station - 2013

Target N rate: 120 lb/A

Average of 5 Replications

Soil Test
Sulfur: 9 ppm (L)

- Topdressed: April 5th Wheat: Feekes 3
- All treatments received 4 gal/A Pro-Germ. + 2 qt/A Micro 500 broadcast before planting.

13-307

For your winter wheat topdress, High NRG-N or eNhance with 28% will provide similar yield compared to straight 28%, but with lower rates for more acres per tank. Or boost your 28% UAN with the accesS sulfur for top yield.
